

Method Name: Quantitative Analysis of Mycotoxins in Cannabis Biomass and Cannabis Derived Products

Purpose:

AOAC SMPRs describe the minimum recommended performance characteristics to be used during the evaluation of a method. The evaluation may be an on-site verification, a single-laboratory validation, or a multi-site collaborative study. SMPRs are written and adopted by AOAC Stakeholder Panels composed of representatives from the industry, regulatory organizations, contract laboratories, test kit manufacturers, and academic institutions. AOAC SMPRs are used by AOAC Expert Review Panels in their evaluation of validation study data for methods being considered for *Performance Tested Methods* or *AOAC Official Methods of Analysis* and can be used as acceptance criteria for verification at user laboratories.¹

Approved by:

Final version date:

Effective date:

Intended Use: Testing of cannabis biomass and cannabis derived products.

1. Applicability:

Method, or a suite of methods, to identify and quantify Ochratoxin A, Aflatoxin B₁, Aflatoxin B₂, Aflatoxin G₁, and Aflatoxin G₂ in cannabis biomass, hemp and/or cannabis derived products. Ochratoxin A, Aflatoxin B₁, Aflatoxin B₂, Aflatoxin G₁, Aflatoxin G₂ are required analytes. The testing of other toxins in addition to the required toxins can be submitted.

2. Analytical Technique:

Any analytical technique(s) that measures the analytes of interest and meets the following method performance requirements is/are acceptable.

3. Definitions:

Analytes

Ochratoxin A (CAS 303-47-9)

Aflatoxin B₁ (CAS 1162-65-8)

Aflatoxin B₂ (CAS 7220-81-7)

Aflatoxin G₁ (CAS 1165-39-5)

Aflatoxin G₂ (CAS 7241-98-7)

¹ Refer to [Appendix E: Guidelines for Standard Method Performance Requirements](#) in the 19th Edition of the AOAC INTERNATIONAL Official Methods of Analysis (2012).

Total aflatoxins: sum of Aflatoxin B₁, Aflatoxin B₂, Aflatoxin G₁ and Aflatoxin G₂

The testing of other toxins in addition to this list may be possible.

Matrices

Cannabis biomass. — Plant material from Cannabis spp. and its chemical varieties or chemotypes. For example, flower, trim and fiber. Hemp is included in this definition of cannabis biomass.

Cannabis derived products. — Products or extracts derived from cannabis plant material.

Derivative products include but are not limited to:

- a. Ingestible / Edibles
- b. Inhalation products
- c. Concentrates and Extracts
- d. Hempseed and hempseed oil

Method developers may choose one or more of the suggested matrices. Method developers must specify the matrix or matrices used.

Quantitative Method of analysis for which response is the amount of the analyte measured either directly (enumeration in a mass or a volume) or indirectly (color, absorbance, impedance, etc.) in a certain amount of sample.

Limit of Quantitation (LOQ). — The minimum concentration or mass of analyte in a given matrix that can be reported as a quantitative result (AOAC SMPR guidance 3.5). Accordingly, the LOQ is the lowest concentration or mass that can be reported as a numerical value. Scientific justification for the procedure used to determine LOQ should be provided.

Limit of Detection (LOD). — The limit of detection (LOD) is the smallest measured concentration of an analyte from which it is possible to deduce the presence of the analyte in the test sample with acceptable certainty. There are several scientifically valid ways to determine LOD and any of these could be used as long as a scientific justification is provided for their use.²

For examples, see *Guidance for Industry Studies to Evaluate the Metabolism and Residues Kinetics of Veterinary Drugs in Food-Producing Animals: Validation of Analytical Methods Used in Residue Depletion Studies*²

Recovery. — The fraction or percentage of fortified or incurred analyte that is recovered when the test sample is analyzed using the entire method.

Repeatability. — Variation arising when all efforts are made to keep conditions constant by using the same instrument and operator and repeating during a short time period; expressed as the repeatability standard deviation (SD_r) or % repeatability relative standard deviation (% RSD_r).

² Guidance for Industry Studies to Evaluate the Metabolism and Residues Kinetics of Veterinary Drugs in Food-Producing Animals: Validation of Analytical Methods Used in Residue Depletion Studies, U.S. Food & Drug Administration, (2015).

Reproducibility. — The standard deviation or relative standard deviation calculated from among-laboratory data; expressed as the reproducibility standard deviation (SD_R) or % reproducibility relative standard deviation (% RSD_R).

Measurement Uncertainty. — Non-negative parameter characterizing the dispersion of the values being attributed to the measured value.³

4. Method Performance Requirements:

Parameter	Requirement
Limit of quantitation, LOQ ($\mu\text{g}/\text{kg}$)	Less than target level in Table 1
Applicable range, ($\mu\text{g}/\text{kg}$)	Must be stated
Limit of detection, LOD ($\mu\text{g}/\text{kg}$)	Must be determined and method of determination detailed. For example: 3.3 x standard deviation of blank sample (refer to ICH Q2 guidance ⁴)
Recovery, %	60-120%
Repeatability, RSD_r , %	$\leq 22\%$ for 1 to $<100 \mu\text{g}/\text{kg}$ $\leq 11\%$ for 100 to $999 \mu\text{g}/\text{kg}$
Reproducibility, RSD_R , %	$\leq 44\%$ for 1-999 $\mu\text{g}/\text{kg}$
Measurement Uncertainty	Must be determined and method of determination detailed.

Table 1: Target levels for analytes to be included in method. Example regulatory limits can be found in the Appendix 1.

Compound	Target level ($\mu\text{g}/\text{kg}$)*	Target LOQ ($\mu\text{g}/\text{kg}$)
Ochratoxin A	20	Less than target level
Aflatoxin B ₁	5	Less than target level
Total aflatoxins [^]	20	Less than target level

* Methods with lower target levels will be accepted. LOQ should be less than the target level a method developer is using for their method.

5. System Suitability Tests and/or Analytical Quality Control

Suitable methods will include blank check samples, and check standards at the lowest point and midrange point of the analytical range.

6. Reference Material(s)
